What is the Avante system?

With Avante, you can bring the authentic beauty of brick to virtually any design and construction scenario.

Avante from PGH Bricks & Pavers is a truly versatile ventilated rainscreen facade system. It has been designed to allow architects and designers the opportunity to use brick in situations that have traditionally been challenging.

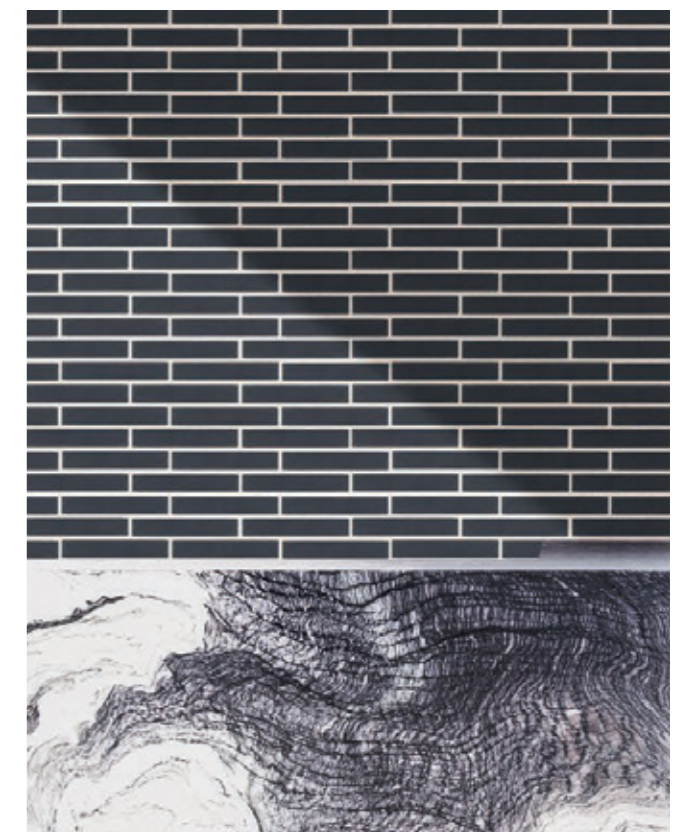

This lightweight walling system is ideal in tight situations where a brick finish is desired to work in conjunction with traditional brickwork. It's perfect for both new construction and re-cladding projects across many project types. Avante is highly cost-effective and can be used internally and externally, allowing you to easily transcend the common boundaries of space, weight, wall thickness and site mess.

Key benefits of Avante.

Bring the beauty of brick to any space.

- Easily bring the look of brick to challenging construction scenarios.
- Perfect for commercial, retail or hospitality spaces.
- Lightweight – approximately 55kg/m², compared to approximately 200kg/m² for traditional brick.
- Can be used with a wide range of substructures including concrete, timber frame, structural steel and masonry.
- Ideal for both new construction and re-cladding projects.
- Versatile system that's safe, secure and simple to install.
- Create stunning internal spaces without weight or wall cavity limitations.
- Seamless integration with traditional masonry.
- Lower material handling requirements and reduced mess onsite.
- Certified as being compliant to the requirements of the NCC for structural stability, weatherproofing and non-combustibility.

Discover the Avante Core Range.

A new way forward for brick design.

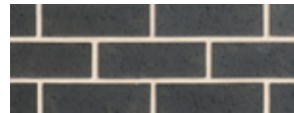

The Avante lightweight walling system brings your design vision to life, with the Avante Core Range of colours featuring a beautiful selection of brick tones to suit any design. Bricks are known for their rich, consistent and durable colour, making them the perfect choice for designing projects that really stand out.

The new way forward in lightweight walling systems.

Avante is a versatile ventilated rainscreen facade system that allows you to easily bring the beauty of brick to complex construction situations. It's perfect for multi-residential and commercial projects, and can be used in both new builds and in re-cladding.

Step 1

- Rows of profiled steel sections are fixed to the backing structure with vertical support at maximum 600mm centres.
- Sections are designed to interlock vertically.

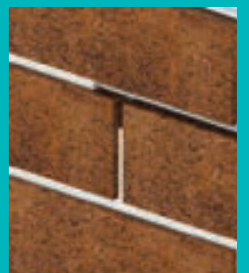

Step 2

- Avante brick facings are clipped into place.
- Choose from two rail sizes, 76mm & 50mm high options.
- Clipping process ensures consistent horizontal joints are achieved.
- Vertical joint spacing can be adjusted to suit design requirements.

Step 3

- Mortar applied using a pump system.
- Preferred joint profiles are ironed or flushed.

[Click here](#) to discover today how Avante can help you bring the stunning beauty and design flexibility of brick to projects you never thought possible.

PGH Bricks & Pavers is part of CSR Limited, the name behind some of Australia and New Zealand's most trusted building industry brands, including Gyprock™ plasterboard, Bradford™ insulation and Monier™ roof tiles.
